

VISA & UE

Business Model Design - Case Study

Prof. Martina Skender

About the client

Business services provided by an American multinational corporation, Visa was the primary focus of the entire study. Visa is a company that enables digital payments between banks, customers, merchants, and other financial institutions by providing payment solutions under the Visa brand that they can use to provide their clients credit, debit, prepaid, and cash access programs. Visa does not issue cards, give credits, or determine interest rates.

Present the design problem

VISA desires to develop a new revenue channel in response to the arrival of new financial markets.

Approach

Working as a team, we explored several concepts and articulated the issue statement utilizing the design sprint technique.

Solution

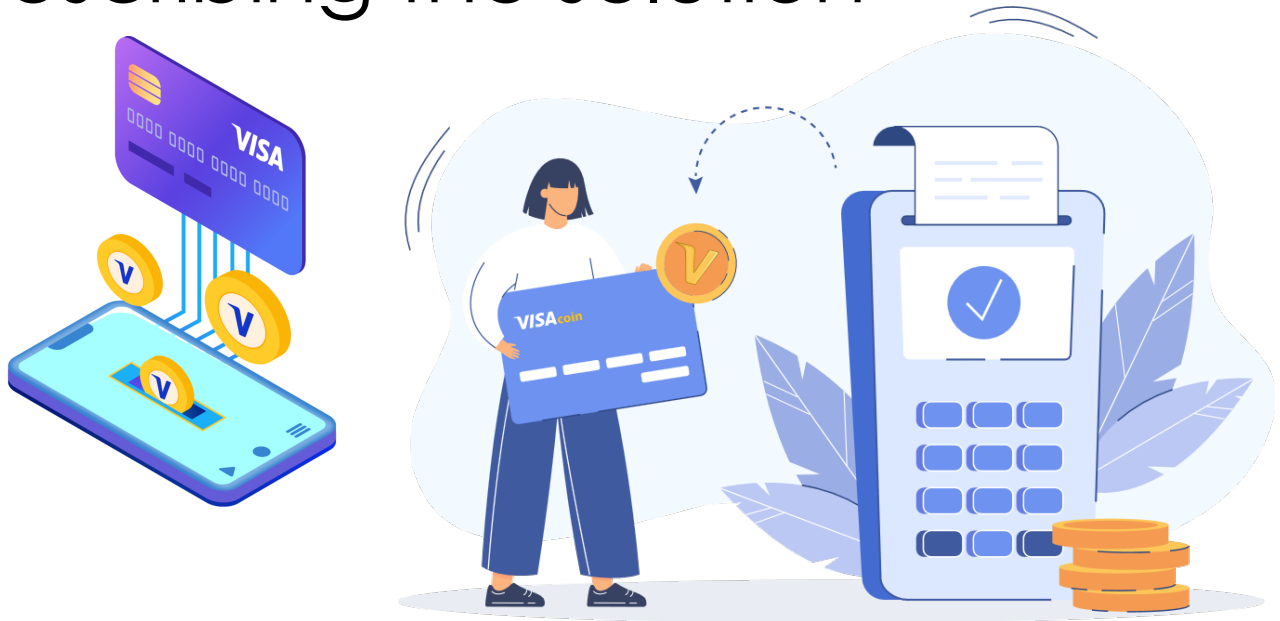

Customer-facing advantages -

A simple way to enter the world of cryptocurrency by leveraging Visa as a platform and rewarding clients with Visa crypto coins when they transact in any way.

Process to achieve the solution

1. Designated roles
2. Used Design sprint to come up with various ideas
3. Ideation session to come up with Innovative ideas
4. Created a value proposition & Business model Canvas referring to Visa's
5. Created the Pitch

Describing the solution

If viable legally, the solution has the potential to become an additional source of revenue.

Key learnings & Conclusion

- Learnt how to implement the design sprint and the innovation process practically
- Also good a better understanding on how to brain storm in a larger team.
