

SAURABH SUDHIR

AI Product Manager

sausud05@gmail.com | +91 78293 91665 | [linkedin.com/in/saurabh0501](https://www.linkedin.com/in/saurabh0501) | [Portfolio](#)
(sausud05-star.github.io/saurabh-portfolio)

Product Manager with 2+ years shipping 0-to-1 and enterprise products across AI, healthcare logistics, and SaaS in India and the US. Consistently identifies the constraint others miss, frames the choice clearly, and drives alignment on the call that creates the most value. Brings AI product fluency to decisions most PMs defer to engineering, knowing when a given AI approach fits the value proposition and when it does not.

EXPERIENCE

Business Analyst, Product and Delivery

Neetable Technologies Sep 2024 - Dec 2025 | Bengaluru

| Sylvester A.I. | AI Pet Health | 0-to-1 | 172+ Countries

- Found no validated demand signal behind the personalisation feature the client wanted in v1. Made the choice explicit: ship personalisation and delay GTM by 6-8 weeks, or cut scope and validate demand post-launch. Drove client alignment through weekly demos against a lean v1 scope. Product launched across 172+ countries in under 4 months, approximately 30% ahead of the original GTM window.

| PhoxHealth | Healthcare Logistics SaaS | US Client

- Conducted discovery for the v5 driver app redesign through user research, empathy mapping, and UX flow analysis. Identified that dispatcher overhead was not a UI problem; the radius-based routing model was generating unresolvable conflicts that dispatchers were correcting manually each shift. Recommended a shift to polygon-based routing, supported by evidence from the discovery sessions. The recommendation was accepted; the redesign reduced dispatcher overhead by approximately 20%.

| BGR Mining & Infra Limited | Coal Mining Operations Platform | 24/7 Fleet Tracking

- Discovered that silent data corruption from connectivity drop-outs was causing 3-5 hours of manual audit per shift, a failure mode that did not appear in any requirement document. Mapped exactly where corruption occurred, framed the case for an offline-first architecture, and drove alignment with the engineering team on the approach before build. Validated across live A/B/C shifts prior to rollout, achieving 100% data integrity across all connectivity conditions.

| Skartify | B2B Commerce Platform | Vendor Onboarding

- Identified vendor drop-off as a friction problem in the onboarding flow, not a missing feature problem. Recommended replacing the multi-step B2B-conventional UI with an Instagram/WhatsApp-style experience, trading feature density for onboarding completion. The redesign was implemented; approximately 1,000 additional vendors onboarded following the flow change.

| Merck Enterprise Tools | APAC | India, Philippines, Thailand

- Coordinated delivery across three simultaneous release streams, three separate stakeholder groups, each with different timelines and requirements. Managed requirements, feasibility checks, and production releases across all three markets without a single timeline slip. Merck India feature release landed one week ahead of schedule.

Project Manager

Smruthi Technologies Sep 2023 - Aug 2024 | Bengaluru

- Diagnosed an estimated ~20% rework rate across active projects as a scope ambiguity problem, not a delivery problem. Proposed sprint backlogs, backlog governance via Odoo, and Figma-first scope alignment with stakeholders before build began. Rework near-eliminated within the first year of implementation.
- Managed end-to-end delivery across three accounts: Apollo Pharmacies (interactive website), Aarogya Hastha Hospital (mobile app), and ResGov (government policy website v1 and v2). Responsibilities included requirements, stakeholder alignment, Figma prototype reviews, and developer handoff.
- Recovered all delayed projects within the first year by establishing sprint planning from scratch. Delivery moved from ad-hoc to a consistent, predictable cadence across all active accounts.

PRODUCT PORTFOLIO

HelloPM AI Product Management Programme 15-week intensive: product sense, PRD writing, prioritisation (RICE, ICE, KANO), value proposition design, AI for PMs (LLMs, RAG, agents, evaluation), analytics, go-to-market

Ride-hailing Reliability Analysis | DriveU | Product Analysis

- Structured discovery across user segments revealed the reliability problem was post-match, not at matching speed. Drivers were matched fast; the perceived unreliability came from the window between match and pickup. Reframing the problem changed the entire direction of retention recommendations, away from algorithm improvements and toward driver commitment signals.

AI-Powered Car Buying Companion | CarDekho | Full PRD | Lovable Prototype

- Identified the core drop-off problem on India's largest car marketplace as a missing decision signal, not a lack of information. Designed AI Fit Score, Trust Cards, and Decision Nudge triggers. Key trade-off: chose a trust model over full AI transparency; users needed confidence to act, not a deeper explanation of the model. Monetisation tied to lead-to-action rate rather than passive engagement. Delivered full PRD and working prototype.

Mental Wellness Navigator | Lomiha | Engineer-ready RAG Specification

- Core product call: no login, no data retention in v1. The value proposition for a mental wellness product targeting young professionals is trust; personalisation requires trust to be established first, not the other way around. Specified retrieval architecture, chunking strategy, system prompt design, and fallback logic for direct engineering handoff.

AI Workflow Practice Platform | Fluent | 0-to-1 | Primary Research | Live Prototype

- Primary research (30 professionals, India and Germany): 28 used AI last week, only 3 felt in control of it. Identified three simultaneous barriers: cognitive load from blank-canvas prompting, trust collapse from AI sycophancy, and social cost of admitting AI dependence. Scoped MVP to one workflow for one ICP. Chose comparison-based output evaluation over open-ended judgment to remove the blank-canvas failure mode from day one.

EDUCATION AND CERTIFICATIONS

- M.A. Innovation Design Management | University of Europe for Applied Sciences, Potsdam, Germany | 2021-2023
- Diploma (4 yrs) in Interior Architecture and Product Design | LISAA Bangalore, co-certified LISAA Paris | Bachelor's equivalent | 2016-2020
- AI for Decision Making | Wharton Online, University of Pennsylvania | 2024
- AI Product Management Programme | HelloPM | Online | 2026

SKILLS

Product Problem discovery, PRD writing, user research, feature prioritisation (RICE, ICE, KANO), trade-off reasoning, backlog management, sprint execution, OKRs, Agile/Scrum, Double Diamond, Value Proposition Canvas

AI/ML AI system design (RAG, agents, agentic workflows, evaluation frameworks), prompt engineering, LLM capability/limitation reasoning, architecture trade-off decisions

Analytics Operational data interpretation, user segmentation, funnel analysis, retention metrics, AI evaluation fundamentals

Tools Figma, Miro, Jira, Zoho Sprints, Odoo, Notion, Slack, Mixpanel, Google Analytics, Lovable, GitHub, n8n
